IP22	Calcium hydrogenorthophosphate	231-826-1	7757-93-9	mono-constituent substance

This Substance Identification Profile (SIP) is developed to represent the Identification parameters of the substance described in line with the Substance Identification requirements of REACH Annex VI and relevant guidance for the purpose of identifying the registered substance and the provision of a 'boundary composition' for IUCLID 6 dossier updates.

Reference	SI Parameter	Value / Not necessary / Not for SIP	Remark / Justification
2.1.A	Name or other Identifiers of the substance		
	CAS (hydrates)	7789-77-7	
	synonyms	dicalcium Phosphate (MCP), Dicalcium Orthophosphate, Dibasic calcium phosphate, Brushite	
	SMILES	OP(=O)([O-])[O-].[Ca+2]	
	Molecular formula	CaHPO4 or Ca.H3O4P	
	Structural image / diagram (indicative)		
	EU food legislation number / INS n°	E341ii	
	State / form	Solid: Particulate / Powder	
	Granulometry range	Up to 100% of particles have a diameter of <100 µm	Considered to pose an inhalation risk. Depending on method of particle size determination it cannot be excluded that the substance falls under the proposed horizontal EU nano definition from 2011, but since validated methodology is missing and a revision of the definition is expected, there is no way to confirm the status.

<p>In accordance with ECHA Guidance for identification and naming of substances under REACH and CLP, version 1.4, when the concentration of the main constituent is <70% the following requirement(s) are met:</p> <ol style="list-style-type: none"> 1. The substance has been shown to have similar physico-chemical properties and the same hazard profile as other mono-constituent substances with the same identity that fulfil the 80% rule. <p>and/or</p> <ol style="list-style-type: none"> 2. The range of concentrations for the main constituent and the impurities overlap the 80% criterion and the main constituent is only occasionally ≤ 80%.
